

Howtouse timetoast

Timetoast is a programme to make a timeline indicating the time when an event took place, details about the event and photos

1. Timetoast usage

In order to show you what you can do with Timetoast have a look at the video tutorial on

<https://www.youtube.com/watch?v=FLzvlzXQLco>

2. Things you need to do before using the programme Timetoast

Each group is responsible for one period of migration

- a) From the results of the survey that we made with the street interviews gather the people according to their immigration period:

1850 – 1899 Group 1

1900 – 1945 Group 2

1946 – 1989 Group 3

1990 – 2014 Group 4

2015 – 2019 Group 5

- b) Select a photo for your period by either taking the photo of a person you interviewed (that arrived in your period if possible) and convert it into a black and white photo

Name of file: group1, group2, group3, group4, group5

- c) Think about a description for your period of migration

Make two documents:

- Historical background of period: check on the Internet what was going on in Germany and/or in the home countries at that time

Name of file: e.g. group1-timespan

- Event: add numbers from the interviews concerning the number of migrants and countries they came from, things you remember from what people told you during the interview

Name of file: e.g. group1-event

- d) Upload your 3 materials to Twinspace

Choose one person that is responsible for uploading – tell the name to Ms Weber

Responsible person logs in
